

Clear thinking in a complex world

ICM Post Debate Poll for The Guardian

Fieldwork dates: 15th April 2010

Interview Method: Telephone.

Population effectively sampled: All adults aged 18+ in GB

Sampling Method: Within Great Britain, a random sample of telephone numbers was drawn from the entire BT database of domestic telephone numbers. Each number so selected had its last digit randomised so as to provide a sample including both listed and unlisted numbers.

Sample size: 505 adults aged 18+

Data weighting: *ICM Research interviewed a random sample of 505 people by telephone on 15th April 2010. ICM re-interviewed people who had previously been selected at random on a recent telephone omnibus and had told us they would be watching the first live TV debate. All agreed to be spoken to again. The sample has been weighted to the profile of all people selected at random who previously stated they would be watching the debate.*

Questions: The computer tables attached in PDF format show each question, in full, in the order they were put to respondents, all response codes and the weighted and un-weighted bases for all demographics and other data including but not limited that published .
